

Alphacool Core 100 Aurora Reservoir D5/VPP Acetal/Acrylic

Alphacool article number: 15393

Quick Info

The Alphacool Core reservoir combines performance with design. The tube of the reservoir is made of acrylic, the D5/VPP pump top and the lid of acetal. The combination of these two materials gives the expansion tank a discreet appearance. The wow effect is provided by 12 digitally addressable RGB LEDs in the pump top and the Lighttower water effect inside the acrylic tube.

- Simple maintenance and control of the water cooling system
- Easy filling, draining and venting possible
- Brilliant digital aRGB illumination

Scope of delivery

1x Core 100 Aurora reservoir D5/VPP Acetal/Acryl, black	2x stand bracket
4x M4x6 screws	1x screw plug
8x M4x8 screws	1x Allen key
8x M4x12 screws	1x Plug tool
4x M3x5 screws	1x Digital-RGB adapter
4x M4 nuts	1x O-Ring 53x3,5 pump
2x 120mm bracket	1x pump mounting
2x 120 - 140mm bracket	

Technical data

L x W x H	131 x 76,5 x 76,5 mm
Pump compatibility	D5
Capacity	200 ml
Material Pump top & cover	acetal
Material tube	acrylic
Connection	3x G1/4" internal thread
Maximum working temperature	60 °C
Pressure tested	0,8 Bar
Quantity of digital aRGB LEDs	12
Power digital aRGB LEDs	5V
Power connector digital aRGB LEDs	3-pin JST (male & female switch)
Weight	504 g
Color	black

Packaging dimensions per unit

L x W x H	200 x 148 x 110 mm
Weight	888 g

Other data

Certificates	CE, FC, ROHS
EAN	4250197153935
Customs code	84733080000

The Alphacool Core reservoir combines performance with design. The tube of the reservoir is made of acrylic, the D5/VPP pump top and the lid of acetal. The combination of these two materials gives the expansion tank a discreet appearance. The wow effect is provided by 12 digitally addressable RGB LEDs in the pump top and the Lighttower water effect inside the acrylic tube.

What's new?

Compared to the previous Eisbecher models, the acrylic tube of the Core reservoir has an external thread. This provides more stability and safety when connecting the lid and pump top to the tube. Also new is the integrated digital aRGB lighting. 12 digitally addressable RGB LEDs in the pump top are included in the scope of delivery of the Core reservoir and no longer have to be purchased separately.

Extensive mounting options

Mounting option 1:

Stands are included in the scope of delivery, which, among other things, allow the expansion tank to be mounted on the bottom of the enclosure.

Mounting option 2:

Included in the scope of delivery are 120mm/140mm mounting frames, which can be used to mount the Core expansion tank as desired on free fan spaces, radiators or on the fans on radiators.

Digitally addressable RGB lighting

12 digitally addressable RGB LEDs illuminate the acrylic tube of the reservoir. They are mounted in a ring at the lower end of the tube in the transition to the pump top and provide brilliant illumination of the entire expansion tank. In combination with the Lighttower water effect, a very special ambience is achieved. The digital aRGB LED lighting is connected via a JST 3-pin connector and can be controlled with a digital RGB controller (e.g. Alphacool Aurora Eiscontrol, Art.15360) or a digital RGB capable mainboard.

Lighttower water effect

A special water effect is created in the core reservoir via the riser tubes. If you do not fill the reservoir beyond the top edge of the riser tube, you get a kind of fountain effect. In this case, the water is pushed out the sides of the riser tube and splashed against the glass tube. Depending on the flow of the circuit, the effect is stronger or weaker. The effect can be placed at the lower or upper inlet using the riser tubes included in the delivery.

Pump compatibility

The Alphacool Core expansion tank has an integrated pump top and is compatible with all original D5 pumps as well as all Alphacool VPP pumps. The pump retaining ring, a pump O-ring and all screws are included in the scope of delivery.
